Visionary Auto-Syncer

"The One That Made Auto-Synchronization a Reality"

Visionary Auto-Syncer software is an advanced transcript synchronizing tool that has successfully harnessed sophisticated voice-recognition technology to streamline the process of synchronizing transcripts to audio and video.

Visionary Auto-Syncer is very flexible and allows you to sync and create files such as .vdf, .sbf, .xml and .mdb.

The benefit of using **Visionary Auto-Syncer** is that you can sync one hour of video in less than two minutes. With its easy-to-use QC features, you will be confident that you have a 100% accurate product with minimal effort.

When you perform auto-syncing in-house, your clients will appreciate the fact that their sensitive client materials won't be subject to off-shore processing or exposed to outside service bureaus. This also ensures that your clients, stay *YOUR* clients.

Visionary Auto-Syncer allows you to create a *custom-branded Deposition Viewer* so that you may give your clients synced files to review. The Viewer allows your client to easily search, identify and use key testimony quickly. When finished, you can then add the deposition to the entire case in **Visionary Pro**, our Discovery Management and Trial Presentation software.

No other product compares with **Visionary Auto-Syncer** for its speed, accuracy and ease of use. With **Visionary Auto-Syncer** on your side, you will accomplish more with less effort.

Call us today to see why legal professionals trust Visionary Auto-Syncer to sync their audio and video files.
